TEACHING AND RESEARCH FIELDS

Fields: Industrial Organization, Applied Econometrics

HONORS, SCHOLARSHIPS, AND FELLOWSHIPS

2018	Spring Dissertation Writing Fellowship, UT Austin
2017	Departmental Summer Research Fellowship, UT Austin
2016	Departmental Summer Research Fellowship, UT Austin

RESEARCH EXPERIENCE AND OTHER EMPLOYMENT

2009-2017	US Department of Transportation, Volpe National Transportation Systems Center, Economist
-----------	--

TEACHING EXPERIENCE

Summer, 2015	Introduction to Economics, Instructor
Fall, 2017	Introduction to Microeconomics, TA for Professor Schneider
Spring, 2017	Industrial Organization, TA for Professor Miravete
Fall, 2016	Macroeconomic Theory, TA for Professor Coibion
Spring, 2015-16	Current Issues in Business Economics, TA for Professor Miravete
Fall, 2015	MA Macroeconomics, TA for Professor Paal

Fall, 2014	PhD Macroeconomics I, TA for Professor Glover
Spring, 2014	Introduction to Macroeconomics, TA for Professor Paal
Fall, 2013	Introduction to Macroeconomics, TA for Professor Klis

PROFESSIONAL ACTIVITIES

Graduate Student Research Seminar Co-Organizer, Fall 2016 – Summer 2017

WORKING PAPERS

Job Market Paper

“Upstream Quantity Discounts and Double Marginalization in the New York Liquor Market”

This paper exploits a unique data set of price schedules to provide the first empirical estimate of the welfare impact of second degree price discrimination in an intermediate goods market. Theoretical predictions in such a context are ambiguous. Quantity discounts at the wholesale level reduce costs for larger retailers, increasing efficiency. However, quantity discounts raise input costs for smaller retailers, increasing prices consumers may pay. The combined welfare effects on consumers depends on how much of input cost discounts are passed through to consumers and the distribution of retailer size. I develop and estimate a model of the New York State retail liquor market where wholesalers offer a multi-part nonlinear tariff for each product. The structural model is then used to estimate the welfare impact of restricting wholesale pricing to be linear. I find that banning quantity discounts reduces total welfare by approximately 13% on average. Consumer surplus and wholesaler profit decline by approximately 25% on average. Average retailer profit increases by a similar magnitude, though effects for a particular retailer are heterogeneous across retailer size.
